

The Street Bag

INLET PROTECTION

- Filters stormwater runoff
- Engineered monofilament geotextile with high tensile strength
- Effectively traps sediment particles while providing high flow capacity for cast inlets
- Overflow holes to help prevent street flooding common with other types of inlet protection
- Designed to meet DOT environmental standards
- Costs less than other devices used for inlet protection
- Reusable
- Can be used in conjunction with a natural biopolymer flocculant

Typical installation

Rain event performance test

Filtered stormwater debris

Remove, clean, reuse
